

HARSHA KUMARI

Computer Science Undergraduate · Aspiring Software Engineer
Karachi, Pakistan · 03362618323 · kumariharsha578@gmail.com

PROFESSIONAL SUMMARY

Driven Computer Science undergraduate at IOBM with hands-on experience in Java, JavaScript, C, HTML, and CSS, and a proven track record of building functional software projects from concept to completion. Developed hardware-based calculators, inventory management systems, and interactive web-based tools, demonstrating real-world problem-solving ability. Eager to contribute technical skills, a fast-learning mindset, and a strong work ethic to an engineering team.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Institute of Business Management (IOBM), Karachi | 2024 – Present

- Active member of the Tech Visionary Society (TVS) – participating in peer workshops and digital literacy drives.
- Member of the Social Welfare and Trust Society (SWAT) – contributing to community outreach initiatives.

TECHNICAL SKILLS

Languages: Java · JavaScript · C · Assembly Language · HTML5 · CSS3

Concepts: Object-Oriented Programming · Data Structures · Algorithms · REST API Integration

Tools: Git · VS Code · Google Workspace · Microsoft Office Suite · Canva · Trello

Soft Skills: Problem Solving · Teamwork · Adaptability · Communication · Ownership

EXPERIENCE

Freelance Digital Content Creator · Self-Employed

2024 – Present

- Designed 20+ social media graphics and post templates using Canva, maintaining consistent brand aesthetics for student project teams.
- Produced and edited short-form video content (reels, slides) using CapCut and VN, improving engagement through structured visual storytelling.
- Collaborated with peers on digital deliverables including presentation decks and promotional materials under tight deadlines.

PROJECTS

4-Bit Binary Calculator | Hardware (74LS83, Logic Gates)

- Designed a 4-bit binary calculator purely using hardware components, including 74LS83 full-adder ICs and basic logic gates such as AND, OR, and XOR.
- Demonstrated understanding of digital logic design and low-level hardware computation principles.

Medicine Stock Management | Java

- Built a functional system for managing medicine inventory, allowing recording of medicine details, managing purchases, and displaying remaining stock.
- Reduced human error and improved stock management efficiency through an organized, structured approach.

Players Information App | Java

- Developed a Java-based desktop application enabling users to manage football player information through a graphical user interface (GUI).
- Applied OOP principles to build a modular, maintainable codebase with clear separation of concerns.

Merge Sort Visualizer | HTML · CSS · JavaScript

- Built an interactive browser-based tool that animates the Merge Sort algorithm step-by-step, helping users understand divide-and-conquer logic visually.
- Implemented DOM manipulation and JavaScript event handling to control animation speed and array input dynamically.
- Designed a clean, responsive UI with CSS transitions to clearly illustrate each merge step.

Console Calculator | C

- Implemented a fully functional command-line calculator in C, supporting arithmetic operations using arrays, loops, and modular functions.
- Applied structured programming principles to handle edge cases such as division by zero and invalid input gracefully.

Digital Clock | Assembly Language

- Programmed a real-time digital clock using low-level Assembly instructions and hardware timing routines, demonstrating understanding of system-level programming and memory management.

CERTIFICATIONS & ACHIEVEMENTS

- **Young Leaders Conference (YLC) – Participant:** Developed leadership, conflict resolution, and civic communication skills through immersive workshops.
- **Certificate of Participation – Office Automation (Aptech):** Completed foundational training in office automation tools and productivity software.
